BRT Präzisionswerkzeuge is a business division of TBT Tiefbohrtechnik GmbH + Co. and has extensive knowledge in this specialist sector when it comes to deep drilling tools and processes. With our comprehensive expertise, we have built up a large customer base over many years and work with them to constantly develop their deep drilling processes, providing economic solutions that meet their specific requirements.

Even today, deep drilling processes are unfamiliar territory for many machine operators, and BRT-Präzisionswerkzeuge supports them with high-quality tools and in-depth consultation.

The company produces BRT gun drills in different versions, single flute, twin flute, and since 2010 also helical drilling tools. The portfolio is rounded off with accessories for gun drills such as sealing housings, whip guide bushes, and drill bushes. We offer a full repair service for worn and broken drill heads.

We do not make a lot of words, we focus on the essentials:

We involve our customers in our work; we believe excellence of product is achieved by both.

We have grown continuously with this philosophy for over 20 years. It is particularly important to us to process our customers' orders to perfection and react flexibly to the demands of the market. Our owner-oriented company management provides a sound basis for this approach, ensuring that our customers understand how we work and always know who to contact. Of course, we are aware that our clients have high expectations of our work – but our expert team means we have no trouble meeting these expectations at any time.

The size of our business means we are in the perfect position to achieve our market goals and remain relevant for the future. We want to build on this and continue to grow steadily, but still remain efficient. We are convinced that making quick decisions requires short lines of communication and excellent teamwork. So we will continue to cultivate our tried and tested methods, but of course remain open to new things.

Quality & environment

The **Quality** of our drills comes first.
Therefore only perfect quality products
are allowed to leave the plant

Customer satisfaction is paramount:
we always deliver on time

Errors are not condemned. They are meant
to be disclosed, so that **improvements** can
be made immediately. This ensures greater
losses and costs are prevented. We all learn
from our mistakes.

In order to produce as **efficiently** as
possible, our workplaces must be optimally
organized and kept clean

We work to protect the **health** and safety,
and job security of our employees

Our aim is to develop our business
through continuous improvement, so that
our **capability** and competitiveness are
maintained and extended

We always try to choose **alternatives** to
create the minimum possible impact on
mankind and the environment

We strive for continuous improvement that
contributes to ecological, economic and
technical developments

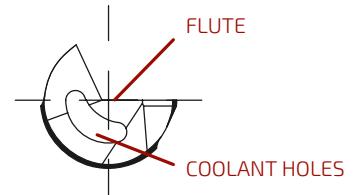

We always plan and implement our business
operations, in accordance with the **legal provisions**

Single flute drilling procedure

Single flute deep hole drilling is used today in the diameter range from 0,8 mm to 50 mm in three versions. In the diameter range below 1,9 mm drills are mainly solid carbide drills in which the cutting head and the shank used consist of one piece. For larger diameters we produce a two-piece design consisting of a carbide cutting head or a steel head with interchangeable inserts, and a steel shank.

Single flute deep hole drilling is characterized by a cooling channel in the tool through which the cooling lubricant is fed and the chips and coolant evacuated via a V-shaped flute.

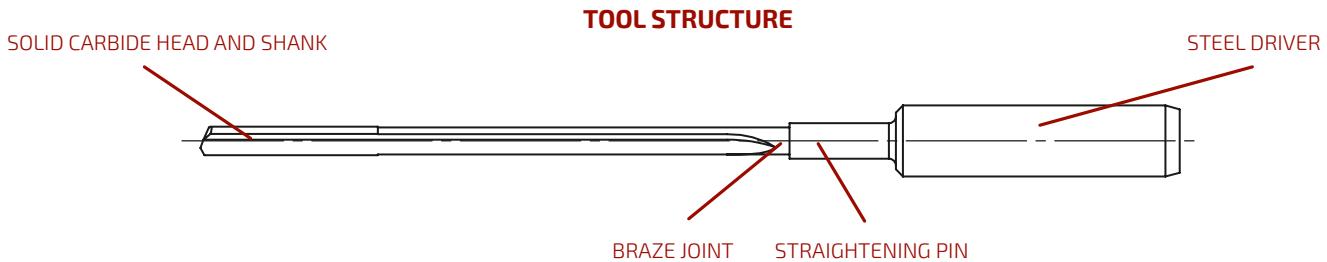

ADVANTAGE

- Easy to regrind
- Lower hole straightness deviation
- Good surface finish
- Diameter tolerances up to H7 are achievable
- Low manufacturing costs
- Can be used on universal machines
- Cross bores possible with longer drill
- Possible use of minimal lubrication
- Very good roundness (Circular shape accuracy)

Type 110 Solid carbide single flute gundrills

TYPE	DESCRIPTION	DRILL-Ø
Type 110	solid carbide boring drill	from 0,500
Type 110-01	solid carbide step boring drill	from 1,500
Type 110-02	solid carbide counterboring drill	from 0,800
Type 110-03	full solid carbide boring drill	upon request

► Tool length depending on the diameter up to 700 mm

The solid carbide single flute drill Type 110, which are connected by a braze joint, consist of the following two components:

- Drill head and drill shank made of solid carbide with a kidney-cooling channel
- Driver with straightening pin of steel

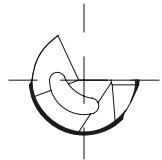

This type of tool is especially process and strong due to its construction. In addition, with low torsional longer service life can be achieved.

Available on Enquiry into completely solid carbide drill (Type 110-03).

DRILL HEAD + SHANK

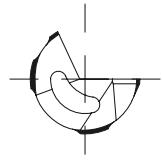

The peripheral shape is optimally adjusted depending on material and hole requirements for your drilling task.

Upon request we can generate special contours for you.

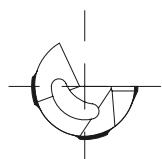

Form G

- universal contour
- for all materials
- low hole straightness deviation
- low tendency to jam

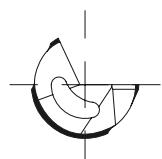

Form A

- tight hole tolerance
- angular entrance and exit bores

Form C

- steel
- difficult to machine materials
- tight hole tolerance

Form EA

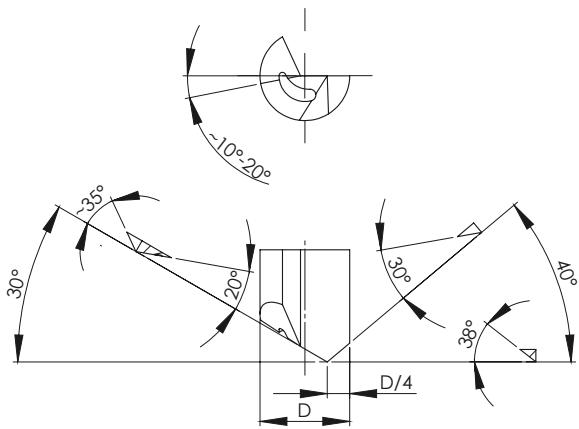

- cross drilling
- angular entrance and exit bores
- tight hole tolerance

▲ The tool diameter is not micable for forms G and EA after finishing!

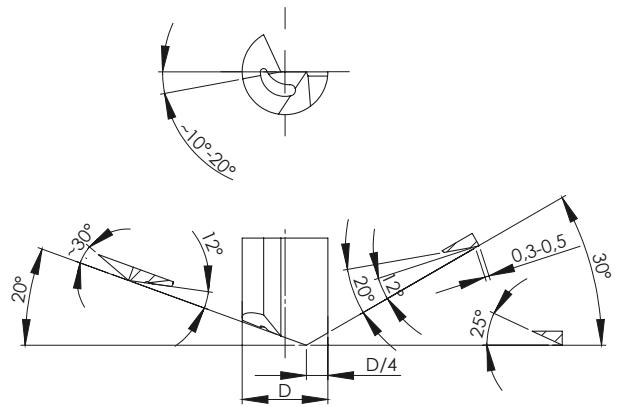

NOSE GRIND

With the change of the cutting geometry, solid carbide gundrills can be optimally adapted to your requirements. For long chipping and hard to machine materials an open special point should be used.

STANDARD NOSE GRINDS

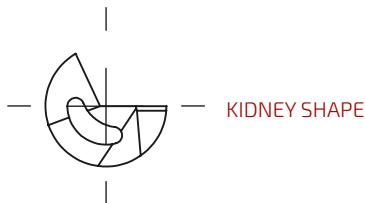

solid carbide standard nose grind 1
for drill range: 0,050 - 4,000 mm

solid carbide standard nose grind 2
for drill range: 4,001 - 12,000 mm

► More nose grinds are shown in the Technology chapter.

Type 120 Single flute gun drills with indexable inserts

TYPE	DESCRIPTION	DRILL-Ø
Type 120L	standard drill with long head	from 12,000 - 28,000 mm
Type 120K	standard drill with short head	from 12,000 - 28,000 mm

► Tool length depending on the diameter, up to 5000 mm

TOOL STRUCTURE

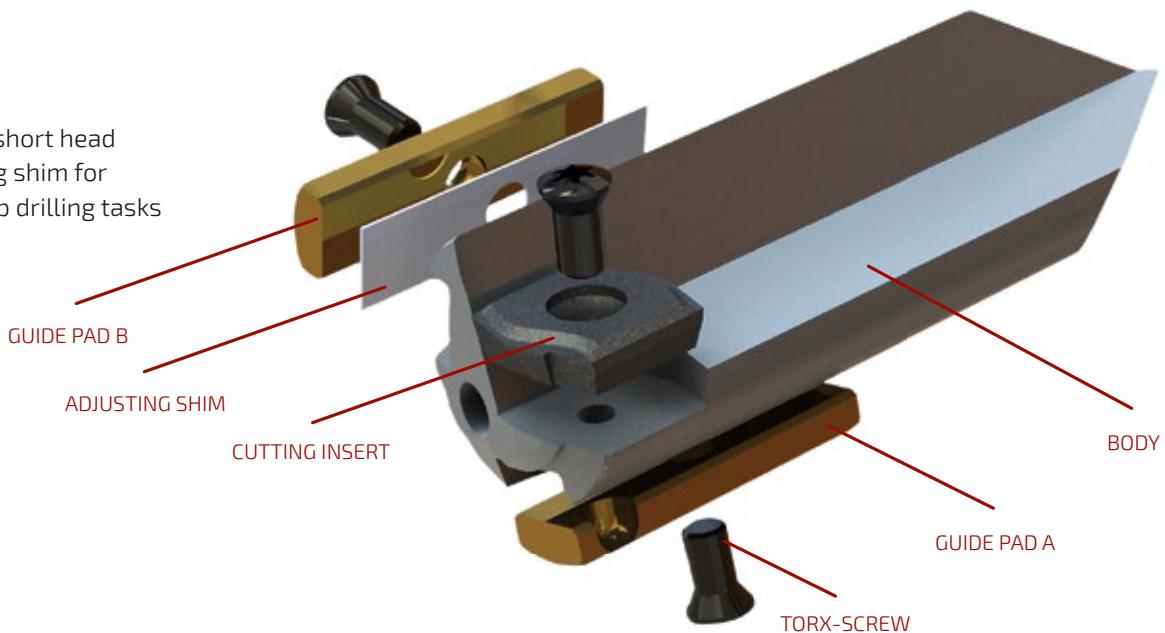

The single flute gun drills with a brazed steel body with cutting insert Type 120 are connected by braze consisting of the following components:

- Steel body made of tempered steel
- Coated cutting insert of carbide
- Coated guide pads of carbide
- Shank of tempered steel
- Driver of steel

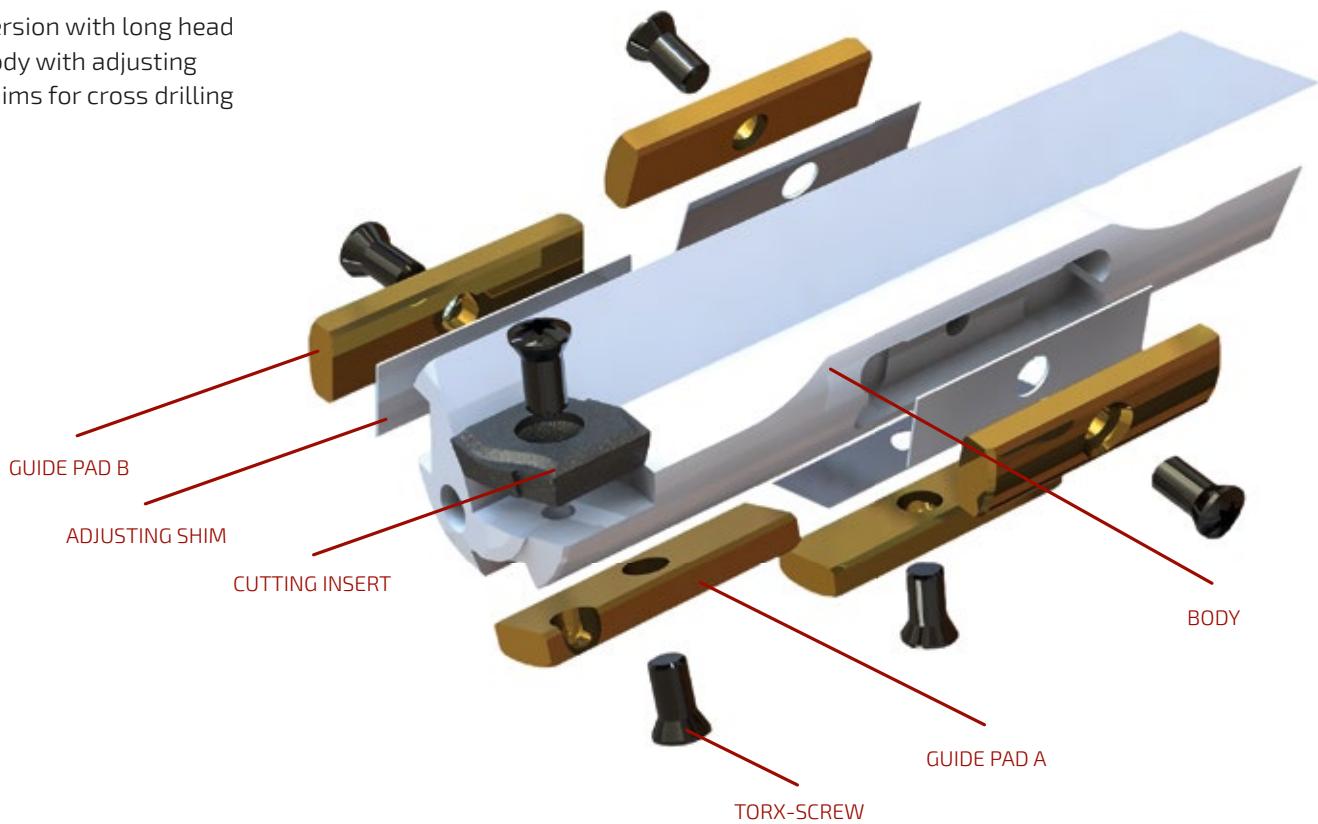

DRILL HEAD

Version with short head
with adjusting shim for
standard deep drilling tasks

DRILL HEAD

Version with long head body with adjusting shims for cross drilling

► Driver see **Type 100** single flute
Gundrills with brazed carbide drill head

INQUIRIES AND DELIVERY

- Please indicate the required diameter, the overall length and the driver style
- Tools fully equipped and ready to use.
- Each tool is supplied with the appropriate Torx wrench for the replacement of wear parts

Requirements Deep Hole Drilling

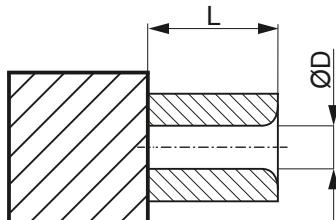

For good hole drilling results, cooling, lubrication and high-pressure coolant systems are required (see page 19).

Single flute gundrilling cannot only be achieved on deep hole drilling machines but is also very good on machining centers (drilling, turning and milling centers) with
 → Deep-hole drilling oil,
 → Emulsion (min. 10 - 12% concentration, with additives),
 → and under certain conditions, with a minimum quantity air/lubrication system.

DRILL GUIDE

The asymmetric geometry single-edged single flute gundrill is not self-starting, therefore a pilot hole or drill bushing is required.

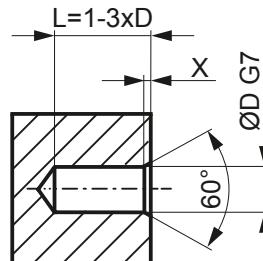

DRILL BUSH

Recommendation: Bushes DIN 179A medium (see page 30)

▲ Drill bushing has a form set against the workpiece

PILOT DRILLING

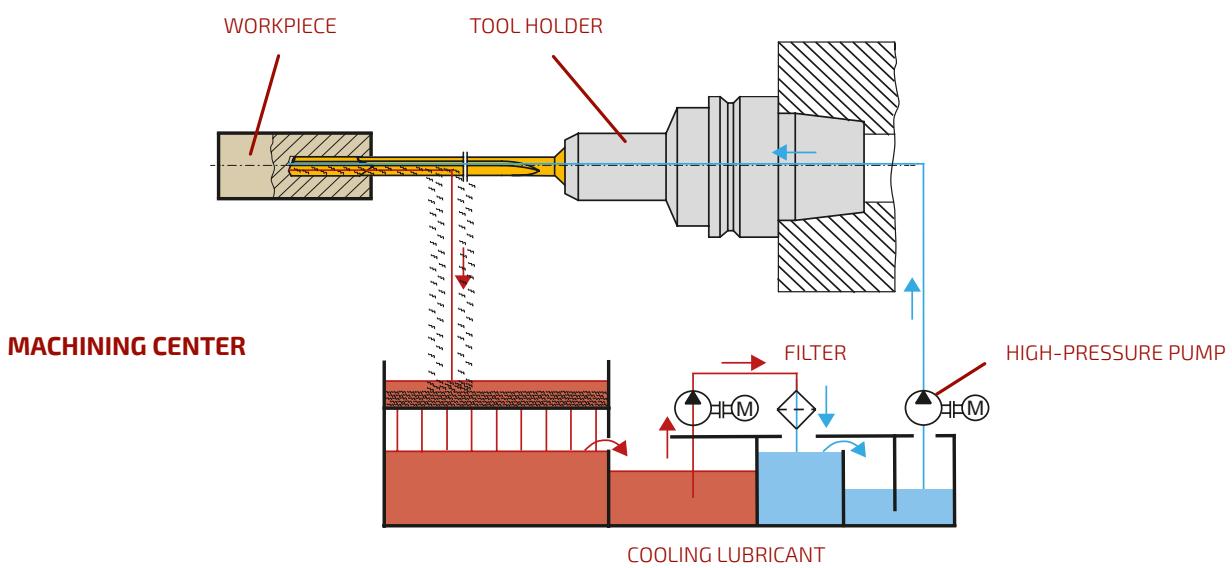

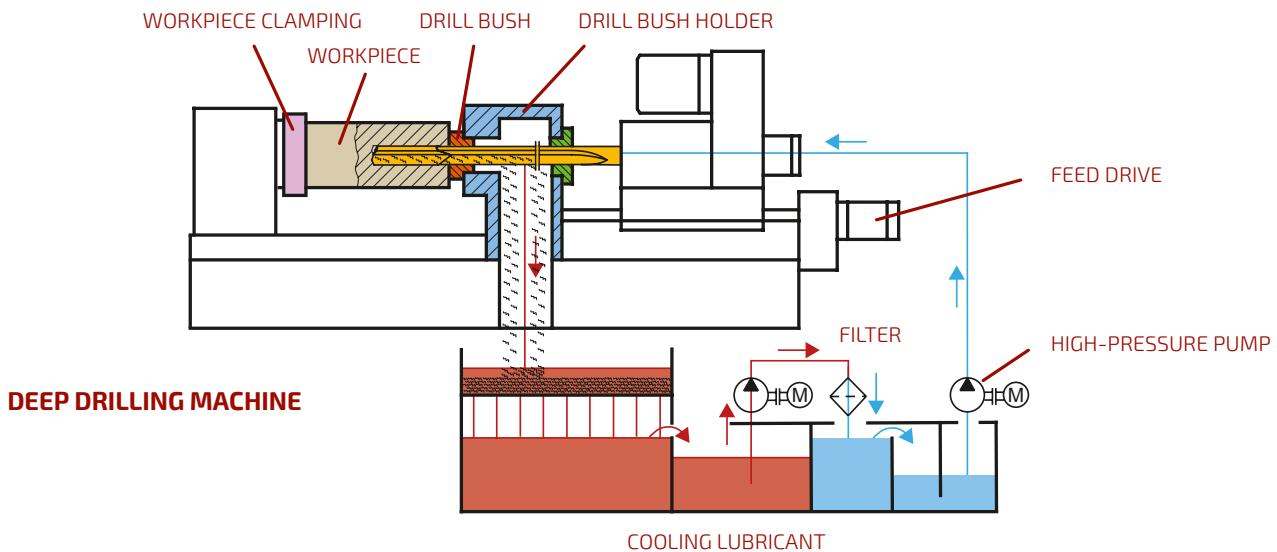

Recommendation: pilot drill with m7 tolerance (see page 32)

To prevent outbreaks during retraction of single flute gundrill we recommend a chamfer (X) of 60°

▲ Too big a diameter difference between the tool and drill bush or pilot hole can cause the following problems:

- poor hole quality
- excessive hole straightness deviation
- drill breakage

Applications

PROCEDURE

- Make a pilot hole
- Enter with stationary spindle or speed < 50 rpm
- Set coolant pressure, speed and feed
- Continuous drilling to depth without peck
- Switch off coolant supply after reaching hole depth
- Retraction with stationary spindle or < 50 rpm

▲ Failure to comply may result in tool breakage

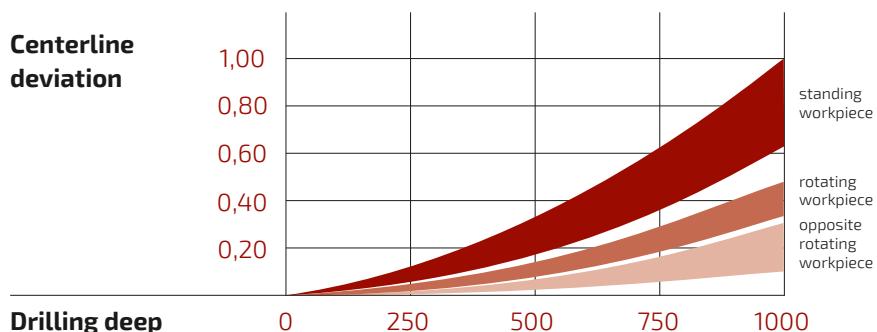

Special nose grinds

VARIOUS FORMS

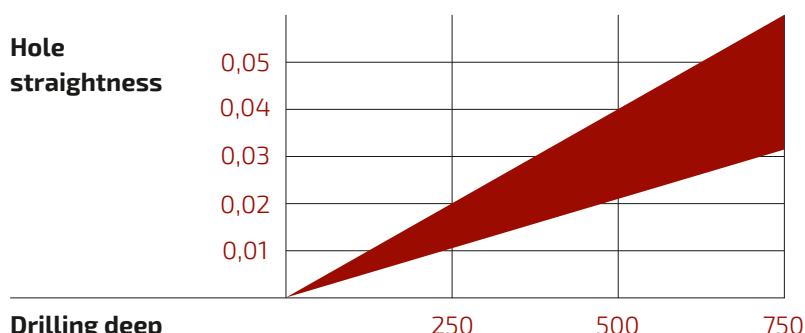

► Please contact us if you need a special grind for your tools.

CENTERLINE DEVIATION *in mm*

HOLE STRAIGHTNESS *in mm*

ACHIEVABLE DRILLING TOLERANCES

SURFACE QUALITY

Roughness class	N8	N7	N6	N5	N4	N3
Quality area	normal conditions				favorable conditions	
Surface roughness values	Rz µm	16 - 25	10	4 - 6,3	2,5	1,6
	Ra µm	3,2	1,6	0,8	0,4	0,2

Type 100 Cutting parameters

The information below are average values as a guide. They depend on material, bore diameter, unsupported tool length, cooling lubricant, drilling conditions and stability of the machine.

MATERIALS GROUP	Structural steel, Carbon steel, Case hardening steel, Low alloyed steel, "good processable" (< 900N/MM ²)	Alloyed tempered steels, case-hardened steels, nitriding steels, tool steels (> 900N/MM ²)	Spring steels, hardened steels, high-temperature steels, cast steel / chilled cast iron, Special alloys, e.g. Nimonic, Inconel, titanium, titanium alloys	Stainless, acid-resistant steel + cast steel, austenitic 18-25% Cr, Ni > 8%	Stainless steel + cast steel, martensitic / ferritic 13-25% Cr (sulphurated) "good processable"

DRILL BUSHING

Cylindrical drill bushings to DIN 179A are available in intermediate design from through hardened tool steel or carbide.

Bushes also available in tolerance G6.

Minimum order for steel:
in 0,1 mm range: 1 piece,
in 0,01 mm range: 3 piece
Minimum order for carbide: 5 piece

Accessories for machining centers

PILOT DRILL from 3 mm

with internal cooling: Typ 201

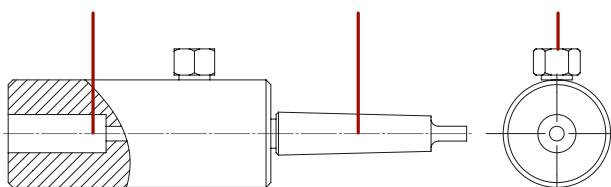

EXTERNALLY CONNECTED TOOLHOLDERS

Externally connected toolholders are available in two versions, up to 8 bar and 120 bar.

Execution to 8 bar:

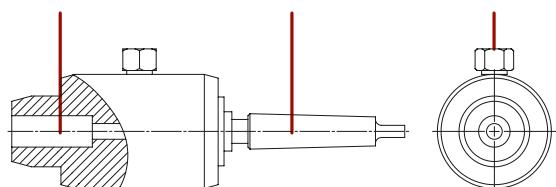

DRILL DRIVER ADAPTORS MACHINE ADAPTORS INFLOW COOLANT

Part-No.: BZ160001

Execution to 120 bar:

DRILL DRIVER ADAPTORS MACHINE ADAPTORS INFLOW COOLANT

Part-No.: BZ170001

► When ordering, please specify the machine adaptors and clamping element (driver).

MINIMUM LUBRICATION (Atomized Spraymist)

Part-No.: BZ120001

ADVANTAGE

- Simple operation
- Lowest investment costs
- Low space requirement
- Flexible use on a variety of machines
- No interruption of production flow
- Time savings through the elimination of disassembly, assembly and transportation costs

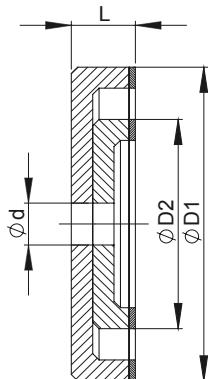

► To operate this device, you need only your in-house compressed air system.

Accessories for regrinding

GRINDING WHEEL

Tandem grinding wheels are particularly suitable for rough and finish grinding of single flute gundrills.

PART-NO.	$\varnothing D1$	$\varnothing D2$	$\varnothing d$	L
